- (54) Ink refilling method for ink jet cartridge, recording apparatus using the method and ink container
- A method for refilling liquid using a refilling container (5) is to refill liquid to a liquid reserving container (3), which is provided with a first chamber (16) that houses a negative pressure generating member, at the same time, having an aperture conductively connected to the outside, and with a second chamber (14) conductively connected with the first chamber through a communicating unit for forming essentially a closed space with the exception of the communicating unit. This method comprises the step of forming an essentially closed space from the atmospheric air by means of the second chamber and the retilling container with the exception of the communicating unit in a state where the liquid surface of the refilling container (5) is positioned higher than the tiquid surface of the second chamber, and the step of arranging the second chamber to be conductively connected with the refilling container by use of a first path that enables gas in the second chamber to communicate with gas in the refilling container, and a second path, which is different from the first path, arranged for shifting liquid in the refilling container into the second chamber. With the method thus arranged, liquid in the liquid refilling container is refilled into the liquid reserving chamber quickly and stably without leakage from the apenture arranged for the first chamber.

CLAIMS INCURRING FEES
The present European patent application comprised at the time of filing more than ten claims.
Only part of the claims have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claim(s):
No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.
LACK OF UNITY OF INVENTION
The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:
SEE SHEET B
(in case of Lack of Unity)
All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the Inventions in respect of which search fees have been paid, namely claims:
None of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the Invention first mentioned in the claims, namely claims:

LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirement of unity of invention and relates to several inventions, or groups of inventions, namely:

1. claims 1-18, 20:

Apparatus and method for refilling liquid using a reserving container having two chambers. A first chamber houses a negative pressure. A second chamber communicates with the first chamber and with a refilling container. Two paths between the second chamber and the refilling container allow gas communication and link supply.

2. claim 19:

Method of operating an ink jet recording apparatus comprising the step of moving a recording head having a container to a replenishment station when it is detected that the container needs replenishment.
